OPERATING GUIDELINES

Reddit u/sellerlogic_support Guidelines

Rules for post discovery, reply preparation, and manual publishing

Version	3.2
Owner	SELLERLOGIC Marketing / Community
Account	u/sellerlogic_support
Date	29.09.2026
Status	Working process specification

Internal working document. Do not publish without approval.

01. Project goal and boundaries

The project builds a positive SELLERLOGIC reputation among Amazon sellers through useful replies from the official corporate sellerlogic_support account. AI finds posts, writes drafts in the voice of a knowledgeable SELLERLOGIC employee, and checks them three times. The final decision and publication always remain with a person.

Primary goal

Help Amazon sellers identify the real cause of a problem, propose a specific next check, and build trust in SELLERLOGIC expertise without directly promoting products.

Core principles

- Every reply must add new practical value.
- The text uses specific details from the post.
- Facts, assumptions, and uncertainty remain separate.
- No covert advertising, product pitch, or invitation to DM.
- The reply voice is a knowledgeable SELLERLOGIC employee with Amazon selling expertise.
- Automation never publishes comments on its own.
- Never use an em dash or en dash. Use only the regular ASCII hyphen -.

Out of scope

- High-volume commenting for activity or karma.
- A fully autonomous Reddit bot.
- Selling SELLERLOGIC products in comments.
- Fabricated seller experience or unverified Amazon claims.

Verified baseline

Metric	Value	Note
URLs in the log	42	1 profile and 41 activity links.
Unique threads	40	One link duplicates a thread.
Accessible profile comments	64	Mapped to the thread list.
Average length	99 words	Range: 22-189 words.
SELLERLOGIC mentions / URLs	0 / 0	Strong non-promotional discipline.

02. Finding new posts

Discovery uses an allowlist of communities and topic signals. New posts are checked every 60 minutes. The goal is not to collect everything, but to find threads where sellerlogic_support can add a useful expert angle.

Step	Action	Rule
1	Start monitoring	Run exactly one cycle every 60 minutes.
2	Collect new posts	Take posts created after the previous successful cycle.
3	Deduplicate	Never process the same Reddit post ID twice.
4	Initial filter	Language, topic, age, community rules, useful content.
5	Review discussion	Read the post and existing comments to avoid repeating an answer.
6	Classify	Assign RELEVANT, NEEDS_REVIEW, or IRRELEVANT.

Community allowlist

- r/FulfillmentByAmazon
- r/AmazonSeller
- r/AmazonFBATips
- r/amazonsellers
- r/AmazonFBA
- r/amazonprivatelabel
- r/Amazonsellercentral

Search signals

Category	Example words and topics
Pricing	Buy Box, Featured Offer, repricing, price, competitor, stockout.
PPC	ACOS, TACOS, CPC, bid, impressions, search terms, ranking.
Profitability	margin, COGS, fees, Net Proceeds, break-even.
FBA operations	inventory, storage, reimbursement, lost units, reports.
Account issues	suppression, deactivation, appeal, Account Health, Seller Support.
Listings	reviews, variation, title, compliance, conversion.

Do not process

- Posts without a specific problem and threads where a complete useful answer already exists.
- Outside expertise: Amazon Vine, listing SEO, copywriting, design, sourcing, manufacturing, logistics, legal, tax, and IP questions.
- Rule circumvention, review manipulation, fabricated documents, or community rules that prohibit corporate participation.

03. Process mechanics and sequence

This is the complete process from a new post appearing to manual publication. Each stage produces a defined output for the next stage.

#	Stage	What happens	Output
1	Monitoring	The system checks allowlisted communities every 60 minutes.	New post IDs
2	Parsing	Collect post content, metadata, and existing comments.	Structured record
3	Classification	Split posts into relevant, uncertain, and irrelevant queues.	Three queues
4	Analysis	For relevant posts, identify the problem, missing data, and a new angle.	Analysis brief
5	Drafting	For relevant posts, AI creates one main sellerlogic_support reply.	Draft
6	Self-check 1	Detect templates, repetition, and AI phrasing.	Rewritten draft
7	Self-check 2	Compare style with recent account comments.	More varied draft
8	Self-check 3	Check naturalness, specificity, and logic.	Final candidate
9	Your review	You edit, approve, or reject the text.	Approved text
10	Manual publishing	You personally publish the comment on Reddit.	Comment URL
11	Output and log	Send the result to Slack and store the full history in Google Sheets.	Alert and history

Automation boundary

The system has no Reddit publishing access and never presses Comment. Its work ends with a ready draft. Only you publish after personally reviewing the text.

Timing logic

- Check for new posts every 60 minutes.
- Each cycle uses the timestamp and post ID from the last successful run.
- If a cycle fails, the cursor does not advance and no posts are lost.
- Drafts have no automatic deadline. They wait for your review.

04. Parsing process

The parser creates a clean structured record for every new post. It does not make a final decision or generate a reply until filtering is complete.

Stage	Data read	System action
1. Fetch	post ID, URL, subreddit, created time	Determine novelty and source.
2. Content	title, body, flair, language	Clean formatting while preserving the original.
3. Context	comment count and available comments	Identify advice already given.
4. Entities	numbers, ASIN, CPC, ACOS, TACOS, dates	Extract factual anchors without changing values.
5. Classification	topic, intent, problem type	Assign one primary topic and supporting tags.
6. Safety	PII, credentials, legal risk, rule conflicts	Redact unnecessary data or block the candidate.
7. Relevance	expertise fit and discussion gap	Assign RELEVANT, NEEDS_REVIEW, or IRRELEVANT.
8. Output	structured record	Send relevant posts to drafting and uncertain posts to your review.

Parsing result

Candidate brief

RELEVANT: prepare a draft. NEEDS_REVIEW: send the URL, text, reasons for and against relevance, and ask whether a reply is needed. IRRELEVANT: do not send to Slack, only log the rejection reason in Google Sheets.

05. Positioning and Tone of Voice

sellerlogic_support sounds like a real, knowledgeable SELLERLOGIC employee with Amazon selling expertise. The account helps identify the real cause of a problem and the next useful check without advertising, corporate language, or performative superiority. It never invents personal experience, cases, or facts.

Dimension	How we sound	How we do not sound
Expertise	Explain the mechanism plainly.	Lecture or talk down.
Confidence	Strong view with a caveat.	Definitely, always, guaranteed.
Practicality	One priority check.	A long list of generic tips.
Native feel	Short paragraphs and normal language.	PR copy, slogans, emojis.
Dialogue	One question if it changes the diagnosis.	Questions only for engagement.

Language patterns

Use	Avoid
Based on the numbers you shared... The stronger signal is... I would separate X from Y. Before changing X, check Y.	Game changer. Best tool. Amazon always... We can solve this. DM us. Our product...

Punctuation rule

Em dashes and en dashes are prohibited in all drafts, final replies, and documentation. Only the regular ASCII hyphen is allowed: -.

06. Topics and reply construction

Topic	Typical help
Pricing and Featured Offer	Eligibility, repricing, stockouts, landed price.
PPC and profitability	ACOS, TACOS, CPC, bids, unit economics.
FBA fees and inventory	Storage, reimbursements, discrepancies, reports.
Listings and reviews	Suppression, titles, compliance, conversion.
Account Health	Appeals, evidence trail, case IDs, Seller Support.
Reporting	SKU versus portfolio, Net Proceeds, COGS.

Reply sequence

#	Step	Control question
1	Find the core issue	What does the author believe is the cause?
2	Find a new angle	What has not yet been said?
3	Anchor in details	Which numbers or facts support the reply?
4	Explain the mechanism	Why is this signal more important?
5	Give a next step	What can the seller check now?
6	Add a caveat	What is unknown or undocumented by Amazon?
7	Ask if useful	Which one answer would change the diagnosis?

Length

- Simple answer: 40-70 words.
- Diagnostic answer: 80-130 words.
- Complex case: up to 180 words.

Stop signals

- There is no new useful angle.
- A fact or personal experience would need to be invented.
- The topic requires legal, tax, or policy expert review.
- The comment would violate community rules or look like covert promotion.

07. Three AI self-checks

After generation, AI checks and rewrites the text three times. These are separate passes, not one generic instruction to check quality.

#	Check	What it detects	Outcome
1	AI patterns and repetition	Detect repeated openings, excessive structure, AI phrasing, and similarity to the last 30 account comments.	Rewrite structure and rhythm
2	Accuracy and value	Check every claim against the post and knowledge base. Remove invented facts, cases, and personal experience.	Verified useful version
3	Human naturalness	Check the SELLERLOGIC employee voice, specificity, conversational tone, corporate wording, and AI cliches.	Final natural version

Hard checks after all three passes

- No em dash or en dash.
- No SELLERLOGIC product pitch, CTA, or unnecessary link.
- No fabricated personal experience.
- No undocumented Amazon claim presented as fact.
- At least one specific detail from the post is used.
- One clear next check or action is present.

Output format

Your review package

Slack, RELEVANT: full post URL, subreddit, full post or target comment text, reason to reply, and the final draft after three checks. Slack, NEEDS_REVIEW: URL, text, reasons for and against relevance, and a question asking whether to draft. IRRELEVANT posts are not sent to Slack. Google Sheets stores all three categories, decisions, drafts, and outcomes.

08. Your review, publishing, and log

#	Action	Your decision	Status
1	Open post URL	Check the current context.	REVIEWING
2	Read the draft	Edit or reject.	EDITED / REJECTED
3	Final check	Confirm facts, tone, and no promotion.	APPROVED
4	Manual publication	Copy and personally publish on Reddit.	POSTED
5	Record outcome	Add the comment URL and final text.	LOGGED

Publishing rules

- Only you publish comments from the corporate account.
- Automation has no permission to create Reddit comments.
- Open the thread again before posting because the context may have changed.
- If a new comment already provides the same answer, do not publish the draft.

Fields in the comments log

Field	Content
Post URL and comment URL	Source and published result.
Subreddit and topic	Topic analysis.
Discovered / drafted / posted at	Process timing.
AI draft and final text	Learn from your actual edits.
Decision	POSTED, REJECTED, SKIPPED.
Reason	Why the reply was published or rejected.
Result	Replies, score, removal, useful insight.

What SLA means

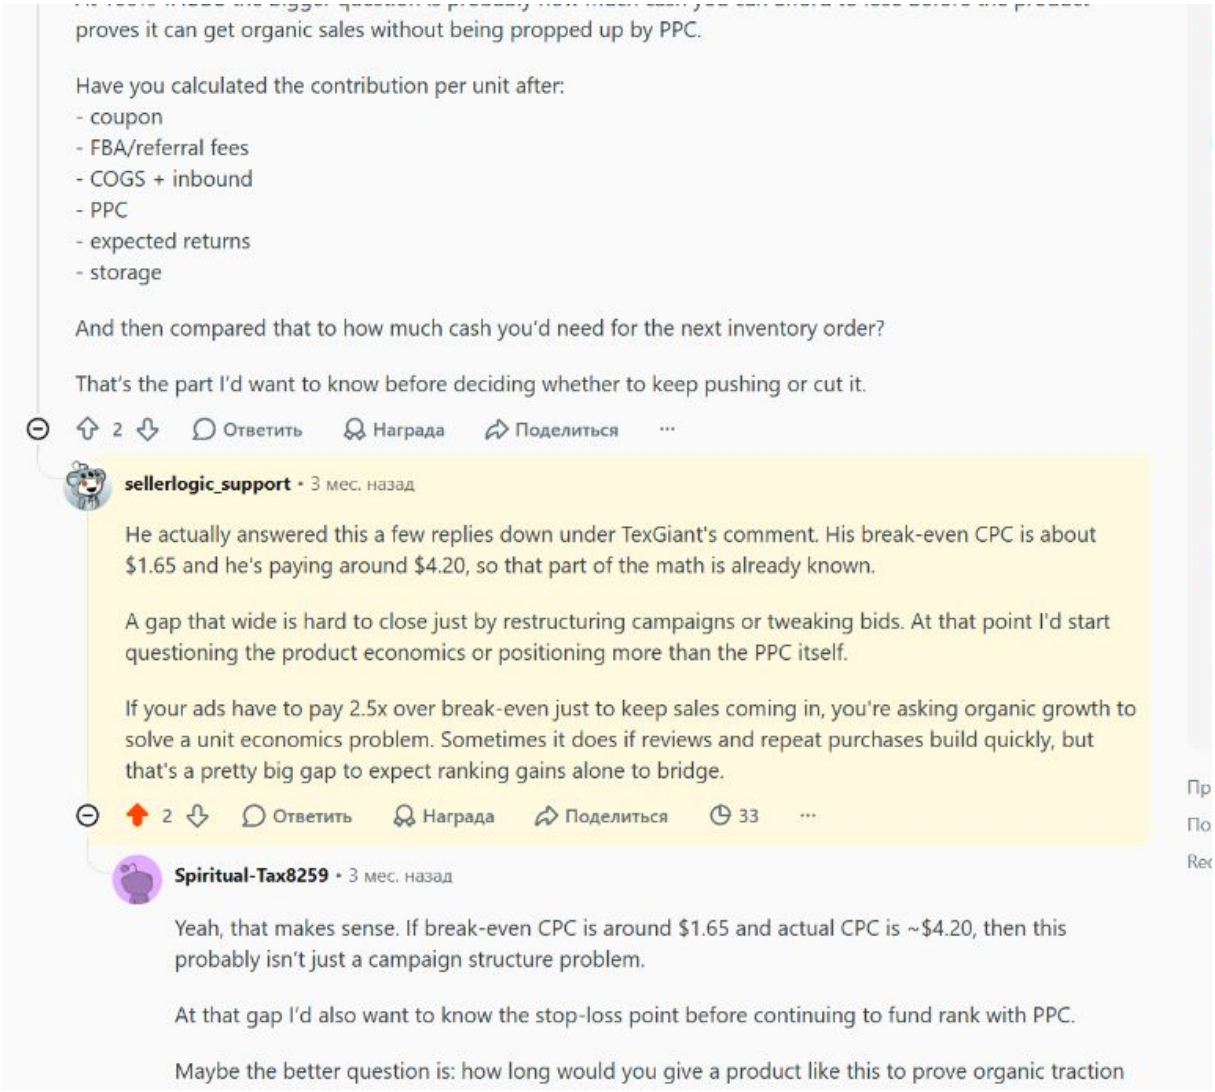

Plain explanation

SLA means Service Level Agreement, a target completion time. Separate SLA classes are unnecessary for this project. There is one technical rule: check for new posts every 60 minutes. Manual publishing time depends on your availability.

A. Real response examples

The excerpts below show sellerlogic_support replies in their actual Reddit context.

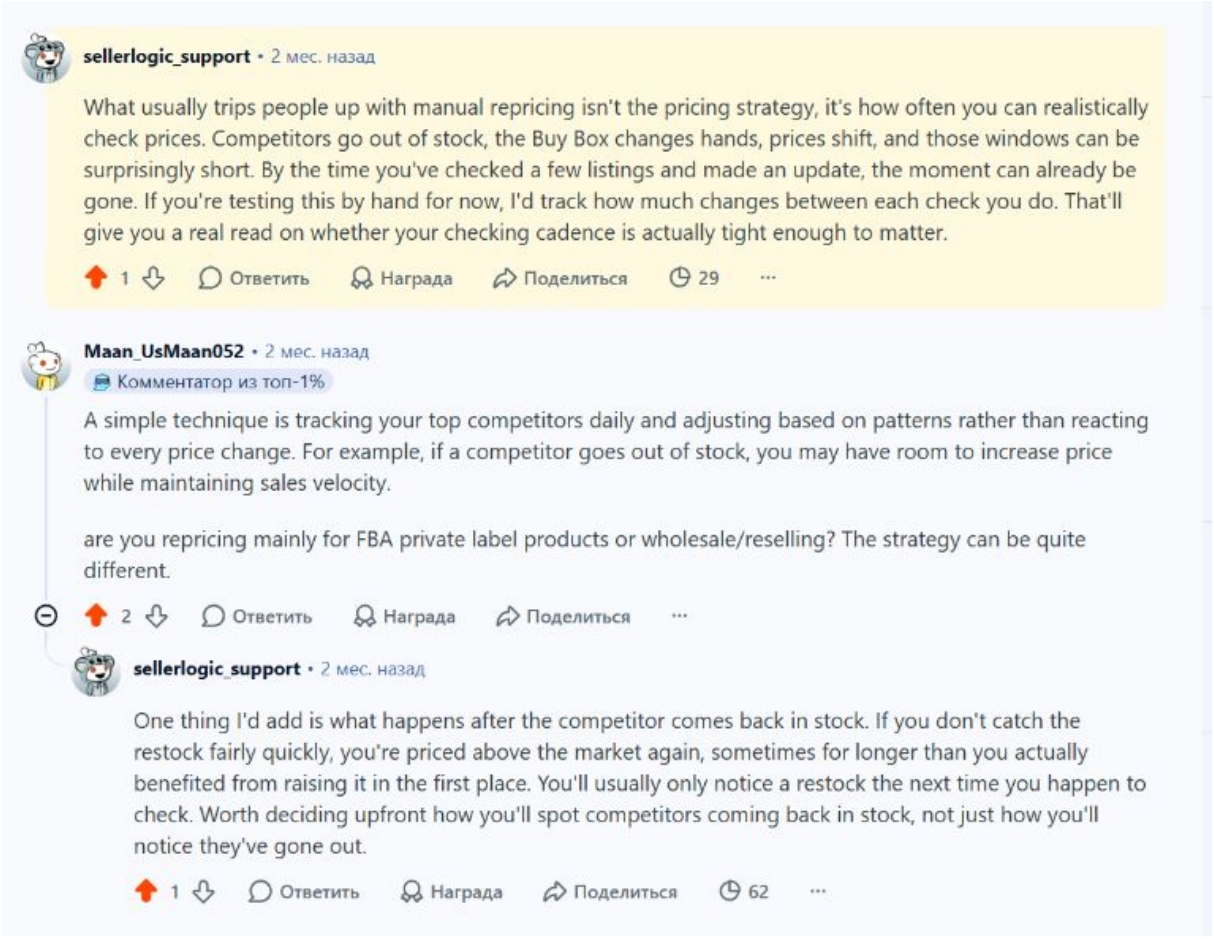

Example 1. PPC and unit economics

What the example demonstrates

The reply uses the author's specific numbers and shifts the diagnosis from campaign structure to product economics and positioning.

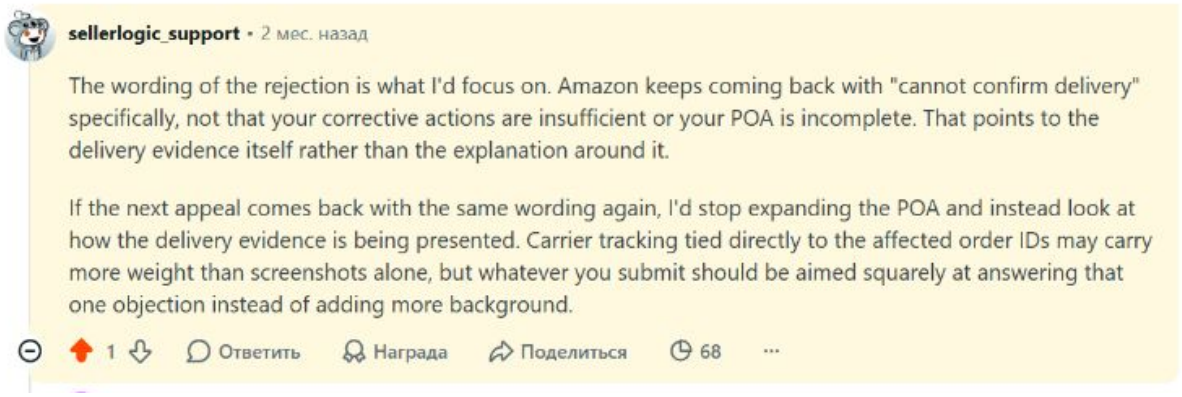

Example 2. Manual repricing

What the example demonstrates

The reply introduces a new angle: the practical limit of manual checks and competitors returning to stock.

Example 3. Seller Support

What the example demonstrates

The reply focuses on the exact rejection wording and recommends evidence for one specific objection. The thread author's data was excluded from the crop.

B. Sources, changes, and data

Sources: Google Sheets comments log, u/sellerlogic_support profile, and 40 unique Reddit threads. This document defines process rules and expected output without recommending a technical implementation.

Version	Date	Change
3.2	29.09.2026	Renamed the document to Reddit u/sellerlogic_support Guidelines.
3.1	29.09.2026	Updated the SELLERLOGIC visual style, embedded Manrope, removed Vine, and removed recommendations about a specific technical implementation.

Minimum candidate data for specialist handoff

Field	Format	Purpose
post_id, url, subreddit	text	Identification and deduplication.
created_at, discovered_at	datetime	Post age and cycle control.
title, body	text	Complete source context.
existing_comments	text/JSON	Avoid repeating others.
topic, intent, tags	enum/array	Routing and filtering.
facts_from_post	JSON	Author numbers and claims.
missing_information	array	What may require clarification.
risk_flags	array	Reasons to block or review manually.
status	enum	NEW, SKIPPED, DRAFTED, REVIEWED, POSTED.
